I would like to say that the Decoding dysfunction is a very important course that brings all the knowledge together for me. I had been going to various courses throughout the 17 years of my Professional journey and most of them were great, but this course helped me to put everything together and helped me to connect the Kinetic chain from Head to Toe. Not only that, all the other courses gave me a powerful tool to treat my patients, but this course/ Instructor actually gave me a tool to treat myself. I have had some neck pain issues from the last 2 years and after the first day of the course, when my Lab partners worked on me, I could notice some amazing relief of pain in my neck and Traps!! And this result was a product of my lab partners just working on my Foot and Psoas. Didn't even get to my neck! I told Anita, on my first day, that I couldn't believe it, that I thought it wasn't possible as it was not SCIENCE!! Even though I knew that there are connections from Toe to head, I was not ready to give the Credit to this technique so easily as we PT's are so trained to look at everything so Objectively. Usually when I get the Neck pain, it radiates to become a Headache and it never goes away until I take some Advil. By the end of the second day, the neck pain and traps pain was completely gone without any other treatment or Advil. I knew that every dollar I had spent for this Seminar is more than worth it.

 I truly enjoyed the Lecture and also Appreciated Nicole who was very much involved in giving her point of view and helped us during the Lab. The Course Lecturer Dr. Anita Davidson is very passionate in her work and I am very glad that I took this course!! I also, envy her employees, as I wish that when I started my Career 17 years ago that someone would have held my hand and guided me as Dr. Davidson is now guiding her current employees! Thanks for your service to our profession. Please consider and allow me to deposit my Honest Testimonial.

Best Regards

Vardhan
